Installation and Removal

BRILLIANT
SAFETY
SOLUTION

PROLOCKS are easy to install: just drive the clamp over the nut with the special tool. A dead blow hammer is ideal for this.

Removal is simple: undo the wheel nuts in the normal manner and the Prolock will come off easily. Alternatively, lever off with a heel bar.

SAFE
SIMPLE
SECURE

Have you considered the cost implications of losing a wheel? Damage to rims, wheel nuts, hubs, tyres and chassis parts as well as severe interruption to your daily routine. Plus the effect on your good repute.

Wheel loss is a reportable incident resulting in investigation and a possible fine.

Worst of all, is the chance of injury or even loss of life

Ensure **YOUR** wheel nuts stay in place Fit Prolocks for peace of mind

Safety solution for wheel nut sizes: 24mm to 33mm

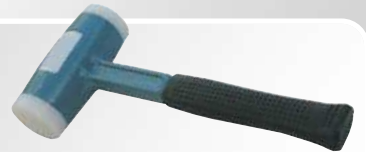

Wheel security has been a serious concern for responsible operators for many years. Correct wheel fitting and regular maintenance are essential yet wheel loss still occurs.

Low cost and innovative Prolock clamps are an ideal solution. Simply fitted over adjacent pairs of wheel nuts, they prevent detachment in the event of loss of clamping force.

Prolocks have an established track record for reliability in Europe for over 20 years and have TÜV approval.

Now imported solely by Parma Industries, Prolocks contribute to safety on British roads, following trials with major bus fleets.
